

Autonomous Robotics via LangX

Who We Are

Centrify was formed to develop AI-driven products and solutions that exceed limitations of GPT technology.. Our most recent LangX version 5 platform allows you to **access your data where it is** without requirements to migrate data to Gemini or Azure platforms.

Autonomous Vehicle Management

- Autonomous flight based on dynamic data feedback and large language models
- Real-time IoT Sensor data processing
- Multi-craft, multi-sensor management
- Real-time GPT data analysis & notifications

Hancock Claims Geo-Thermal Drone Solution

Hancock Claims was our first engagement integrating autonomous flying drones with GPT services and reporting.

Hancock was delivered a pilot application that would replace "truck and ladder" assessment of roof damage with autonomous drones that would eliminate **60% of labor expense** and immediately stream results to carriers via our API integrations.

T1 Underwater Drone

Tello DJI Sensor 2.0 Drone

Today, we are proud to say we have GPT integrations with a breadth of drones, including:

- Tello Gas & Geo-Thermal Sensing Drones
- T1 Underwater GPT responsive Drones
- Ground Surveillance, GPT Enabled Drones

Unitree Go2 Surveillance Drone

Bella Automated Service Robot
